About Us

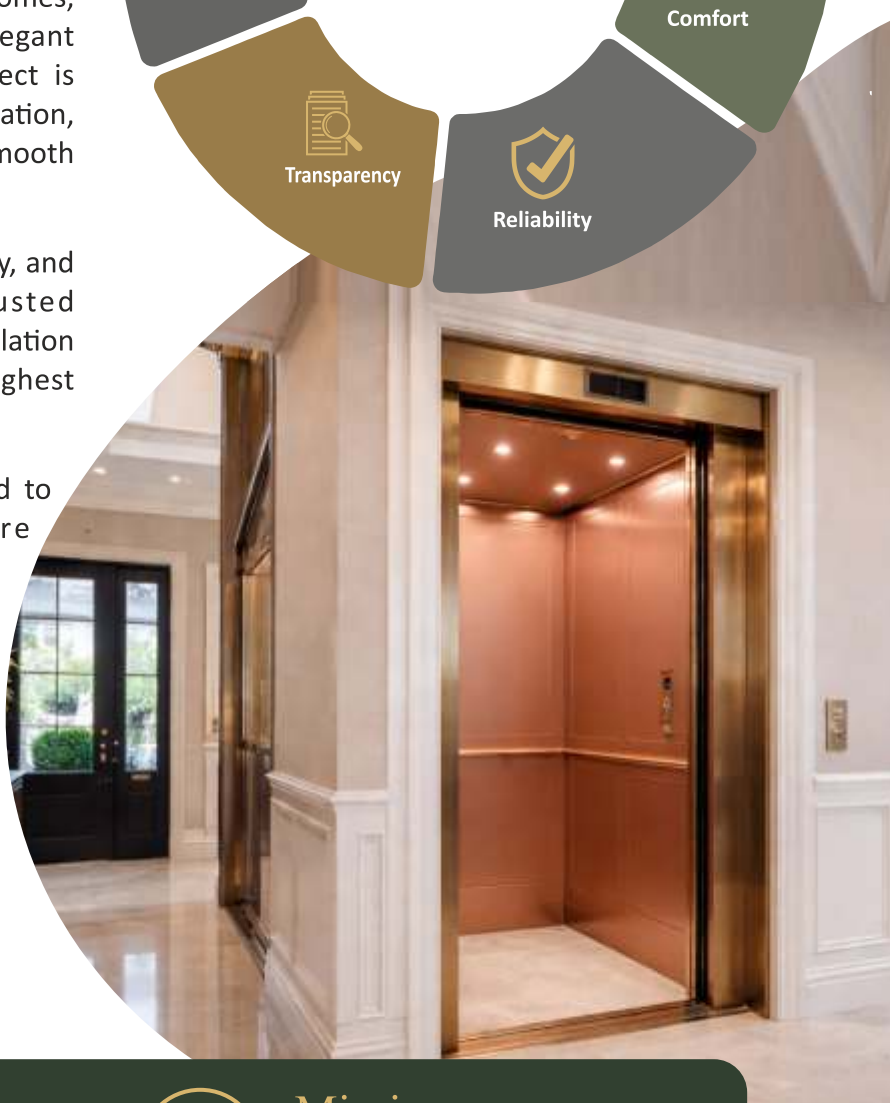

At Bikay Elevators, we believe an elevator is more than just a way to move between floors—it's an investment in safety, comfort, convenience, and a better quality of life.

We provide premium elevator solutions for homes, villas, and commercial spaces, combining elegant design with reliable performance. Every project is guided by expert consultation, professional installation, and dependable after-sales support to ensure a smooth experience from start to finish.

Driven by a commitment to quality, transparency, and customer satisfaction, we work with trusted manufacturing partners and experienced installation teams to deliver solutions that meet the highest standards of safety and craftsmanship.

Based in Ludhiana, Bikay Elevators is dedicated to helping customers create smarter, more comfortable, and future-ready spaces.

We don't just install elevators—we build trust, elevate everyday living, and create lasting relationships with every customer.

Vision

To become one of India's most trusted elevator brands, delivering safe, innovative, and premium mobility solutions that enhance everyday living

Mission

To provide reliable elevator solutions through quality products, professional installation, transparent service, and long-term customer support-elevating trust with every project

Why Choose Bikay Elevators?

The Right Choice for Safe, Comfortable & Reliable Vertical Mobility.

Safety First

Every elevator is designed with advanced safety features to ensure secure and worry-free everyday use

Premium Quality

We work with trusted manufacturing partners and maintain strict quality standards in every project

Professional Installation

Our experienced installation team ensures precise execution with attention to every detail

Customized Solutions

From cabin finishes to design options, every elevator can be tailored to complement your space.

Reliable After-Sales Support

Our commitment continues after installation with responsive service and dependable maintenance support.

Honest & Transparent Service

From consultation to completion, we believe in clear communication, fair pricing, and building long-term trust.

Our Promise

At Bikay Elevators, we don't just install elevators—we deliver safe, reliable, and thoughtfully designed mobility solutions backed by quality workmanship and dependable support. Every project reflects our commitment to earning your trust, one floor at a time.

Safety Features

Engineered for Protection. Designed for Peace of Mind.

Every component in a Bikay elevator is selected to ensure maximum safety, reliability, and smooth performance. Our advanced safety systems protect passengers, equipment, and the building-every single day.

1. Safety Brakes

Elevators also have a safety brake that is attached to the car. Here's how the safety brake works: if the electronics detect that the car is speeding downward, it jams a metal brake from underneath the car into a channel in the guide rails, the metal locking with the elevator travels.

2. Door Sensors

Door sensors (sometimes known as photoelectric or infrared sensors) are mounted on the door edges, door detector, electric proximity edges, or electrodomain is on elevator device that prevents the doors from closing usually installed for accessibility.

3. Door Interlock

The door interlock includes a door lock device and the interlock device. The interlock device prevents the elevator car from moving with the door open and the operative door cannot be opened unless the interlock are located beneath a sill at the bottom edge of the doors.

4. Hoistway Door Interlock

An elevator door moving arrangement includes a door mover and a door interlock device. The arrangement provides an interlock device in a position of the door mover and the interlock device, the interlock being located between the customer sill member at the bottom edge of the doors

5. Hoistway Safety Switches

Inspection speed limit switches are installed near the top and near the bottom of the elevator shaft. If the elevator is travelling at inspection speed, the car will stop at the position which leaves a person ample room from the hoistway overhead or the pit floor.

6. Pit Buffers

A buffer is a device designed to stop a descending car or counterweight beyond its normal run and to absorb the kinetic energy of the impact. They lift the elevator rails during an emergency stop and reduce the car or oil type in respect of the rated speed.

7. Emergency Telephone

A telephone is also installed in the elevator car. Most phones have an alarm button that can be used to call for help in an emergency.

8. Inspection Box

A box is installed on the top of the car. It has power sockets (15A) for temporary use only and is used for the inspection box lockout in Dubai.

9. Auto Rescue Device (ARD)

Auto Rescue Device (ARD) is also known as (ARD) is used to rescue emergency passengers from the elevator in the event of a power failure and blackout in Dubai.

10. Over Speed Governor

These are the safety devices should be used to stop the elevator or to break, depending on the car for the elevator operating conditions.

11. Lift Fireman Switch

A fireman lift is a specialized elevator with advanced safety features. Under normal conditions, it functions as an ordinary passenger lift. During a fire emergency, it is recalled to the ground floor and can only be operated exclusively by emergency responders to transport heavy gear & rescue trapped individuals.
